

EL Series™

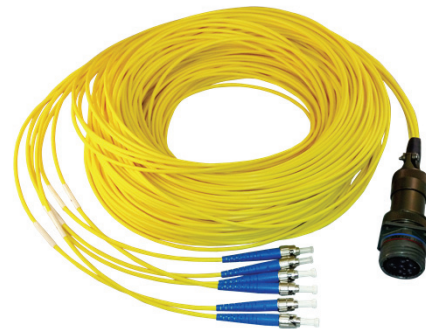

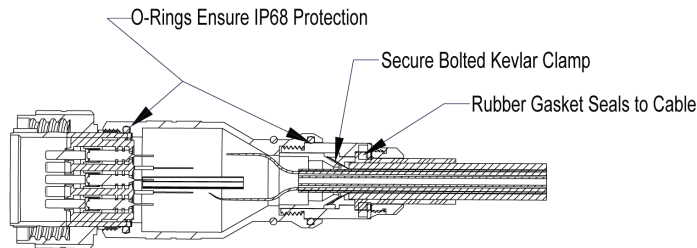

Rugged Contact Cable

Product Description

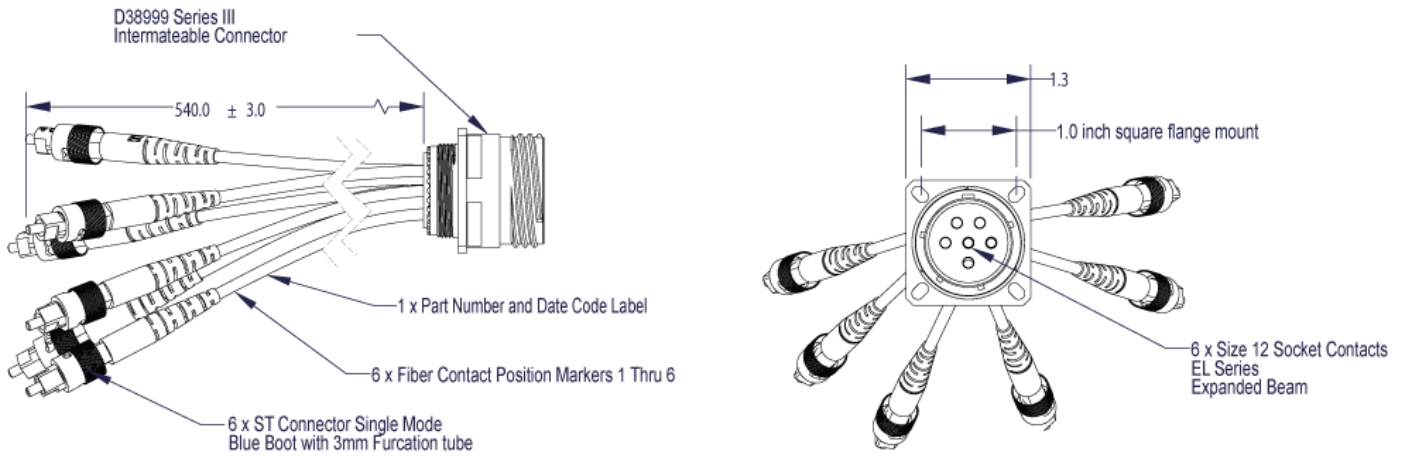

Utilizing the innovative KINGS® EL Series™ contact, these cable assemblies provide a rugged, configurable connection system for all fiber and copper applications requiring high reliability. They are especially suited for outdoor environments where dust, water, other contaminants, or simply a lack of cleaning procedures present issues for standard physical contact connectors. These cables require no cleaning in normal use.

KINGS® can configure and assemble cable assemblies using any supported connector combined with the appropriate fiber or hybrid fiber, or copper cable assemblies. A perfect replacement for TAC-4, or TAC-12 physical contact cables used in military or broadcast applications, these expanded beam cables will provide years of trouble-free service.

Cable mount and Panel mount breakout configurations are available to allow connection to interior equipment. Combine with the EL Series™ video jack to allow optical patching with expanded beam signals all the way from the source to the destination.

This EL-TAC-6 cable provides 6 expanded beam connections and a tactical fiber cable which is crush-proof and has a tensile load capability of over 300 lbs. The strain relief system provides full waterproofing to IP68 to ensure operation even when fully immersed in water.

Part Numbering – Rugged Contact Cable

7	2	5	P	7	2	3	0	3	6	0	1	A
